# SET MORE BRICK AND BLOCK FOR LESS

## MULTIPLE MACHINES IN 1

Rotating Telescopic Forklift, RT Crane, Work Platform...and more!

*Here's what users have to say:*

*Ardito Masonry is a masonry contractor in business for over 20 years. Much of their work is on commercial and high-end residential projects. President and Founder Mike Ardito states...*

*"It's easy to work with, **you'll save time, you'll save money.** I was able to be up on my scaffold more and push my men more. I was able to get my material up there faster."*

*"Using the remote control saves me on labor and time. I don't have to be in the cab, get out of the machine, go on top of the scaffold and answer questions. I'm already on top of the scaffold bringing the material up and answering any questions my foreman has. **The Magni made a 3-person job into a 2-person job.**"*

*"**I can be stationary and with the 360-degrees of rotation,** I have to move the machine far less than a traditional machine. This saved us a lot of time and money and **gave us a much cleaner jobsite. With less movement it is also much safer.**"*

*"**I picked up operation of the machine quickly,** anyone who has driven a machine will pick it up quickly. I think you'll get spoiled frankly, with the articulation and controls."*

*"In terms of safety, **this machine won't let you do anything stupid.** It has its own safeguards built in."*

*"**I was able to set limestone 3-4 times faster** with a Rotating Magni Telehandler than I could have with a traditional telehandler. **This kind of productivity allows me to bid more competitively on and win more work.**"*

# WITH MAGNI YOU WORK...

## FASTER

- Off-load masonry materials
- Stage materials on the jobsite
- Set brick and block faster & higher – up to 167'
- Set a full cube of brick or block – up to 167'
- Lift more weight – up to 28,600 lbs

## SMARTER

- Replace the need for a crane by using our Jib & Hook attachments
- Remove the need to coordinate 3rd party services for hoisting
- Load & unload materials without moving the machine
- Operator feeds materials to themselves using our remote control saving you labor

## SAFER

- Technology prevents operator from putting machine in unsafe situations
- Automatic configuration of the digital load chart for each attachment
- LMI lets the operator know where the load is within safety triangle.
- Customize speed settings for each function of the machine
- Set limits on rotation and height to prevent collisions with obstructions

# MAGNI MAKES YOU MONEY!

FUNCTION	TRADITIONAL EQUIPMENT	CAN MAGNI REPLACE?	ATTACHMENT NEEDED	COMMENT
Off Loading Materials	Forklift / Crane	Yes	Forks or Rotating Forks, Jib with Hook	Reduce crane rental expense and operator costs. RTH allows for faster placement and less movement to offload.
Set Material Over 62 feet	Forklift / Crane	Yes	Forks, Rotating Forks, Jib with Hook, Jib with Winch	Reduce crane rental expense and operator costs.
Position Material on the Site	Forklift/Crane	Yes	Forks or Rotating Forks, Jib with Hook	Reduce crane rental expense. RTH allows for faster placement and less movement.
Deliver Materials to Scaffolding	Forklift	Yes	Forks or Rotating Forks	RTH allows for faster placement and less movement; Rotating fork enhances ability to place materials in tight spots and inside buildings.

## THE MAGNI ADVANTAGE

Magni replaces several machines on a jobsite including a crane, forklift/lull, and manlift resulting in significant savings on crane, rental expenses, permits, logistics, and overall costs. Magni Telehandlers deliver increased productivity and safety with increased profits.
